

Our Commitment to Integrity and Independence

Integrity and independence are the foundation of BFAP's work. As an impartial research organisation, we deliver objective, data-driven analysis to support sustainable development in food systems, including the agriculture, agro-food, fibre, and beverage sectors.

For more than two decades, BFAP has built a reputation for scientific excellence. Our analysis is grounded in rigorous, peer-reviewed methodologies, proprietary modelling frameworks, and validated data. Collaboration with respected partners, such as the FAO, OECD, IFPRI, FAPRI, and Stellenbosch University, ensures alignment with global best practice and safeguards our research from undue influence.

BFAP undertakes contracted research and advisory work for a diverse range of public- and private-sector clients. All commissioned studies are conducted using BFAP's proprietary data, models, and quality-assurance processes. Conclusions are derived solely from empirical evidence, enabling us to inform effective public policy and support resilient, competitive agricultural value chains.

We apply a strict conflict-of-interest policy across all staff and governance structures and proactively manage any potential risks to impartiality. BFAP is committed to transparency in its methods and assumptions, while appropriately protecting the proprietary information of clients and third parties.

This commitment ensures that stakeholders can rely on BFAP for credible, independent analysis that delivers value to the food system and to society as a whole.
